JOHN "SEG" SEGGERSON

Alameda, California ▪ (415) 742-1734 ▪ seg@spacebetweenstudios.com ▪ LinkedIn

SENIOR FRONT-END ENGINEER • VUE, TYPESCRIPT & DESIGN SYSTEMS

Over 15 years of front-end engineering experience across regulated e-commerce, entertainment, creative agencies, and higher education, and over 20 years combined in web, software, and interactive development. Currently owns the front end of a D2C sales and compliance platform (Vinoshipper).

At a Glance

- **Scope**: Interaction design through production code
- **Tech Stack**: Vue 3, TypeScript, Pinia, JavaScript, HTML/CSS/Sass, component libraries and design systems
- **Notable work**: Apple launch experiences, Vinoshipper's platform front end, Telltale's The Walking Dead releases

PROFESSIONAL EXPERIENCE

Senior Front End Engineer ▪ Vinoshipper ▪ October 2020 – Present

Owns front end architecture for a D2C alcohol sales and compliance platform serving consumers, producer clients, and internal admins. Architected a platform-wide AngularJS to Vue and TypeScript migration.

- Set the platform's coding and design engineering standards and built the continuous integration workflow front-end code ships through.
- Replaced a 12-year-old AngularJS front end piece by piece while the platform kept running, with no customer-facing disruption during the transition.
- Developed storefront, checkout, local-delivery, producer-management, and administrative features that simplified online alcohol sales and helped small producers reach customers.
- Built the reusable Vue component library that engineers now rely on, keeping the platform visually consistent and cutting the time to ship.

Senior Developer ▪ Traction Co. ▪ February 2015 – October 2020

Front-end and middleware development at a San Francisco interactive agency, building e-commerce and customer-service web apps for global brands like Apple and McCormick & Company.

- Built the responsive front end for Apple's iPhone Concierge preorder site in HTML, CSS, and Sass, delivering launch experiences that served millions of customers.
- Delivered later Concierge releases on schedules compressed to roughly 6 weeks, half the original build time.
- Developed the consumer-facing registration experience for Apple Camp (annual summer program for kids).
- Programmed the modular navigation and front-end styling for McCormick's corporate and brand sites, structured so the company's internal web team could maintain it long-term.

Front End Web Engineer ▪ John McNeil Studio ▪ Nov 2013 – Feb 2015

Front-end engineer at a design-led Bay Area creative studio, turning designer work into production web and mobile interfaces. Enterprise clients included Juniper Networks, CA Technologies, and Aricent.

- Built a product-finder web app for CA Technologies that returned the right products from search, giving customers a simple path through a large product portfolio.
- Implemented the navigation and general style guide for Juniper Networks' corporate website, setting the front-end patterns the site was built on.

Web Design & Programming (Freelance) ▪ MegaCynics / Dracogen Investments ▪ Feb 2013 – Feb 2014

Designed and built the website and social media promotion tools for the MegaCynics webcomic, owning the client engagement end to end.

Software Engineer, Interactive Experiences & Release Systems ▪ Telltale Games ▪ Apr 2007 – Jul 2012

3-role progression at the game studio behind The Walking Dead, Sam & Max, and Back to the Future. Shipped monthly episodic releases across major gaming platforms with as many as 6 titles in production at once.

- Managed and produced builds for monthly episodic releases across consoles, desktop, and mobile, building the installers, build management systems, and release pipelines behind them.
- Scripted gameplay, designed puzzles, and built UI in Lua and proprietary tools across franchises such as Sam & Max, Puzzle Agent, Back to the Future, and Jurassic Park.
- Co-developed the analytics system behind The Walking Dead Season 1's player-choice displays, which helped turn gameplay telemetry into public stats and internal marketing insights.
- Handled Steamworks integration and console submissions across platforms.

Lead Web Developer ▪ Emerson College ▪ Apr 2005 – Mar 2007

Led a 3-student development team created inside Enrollment & Student Affairs to support the central IT department with application development. Replaced paper-based admissions and housing processes with web tools and later headed the development function.

- Replaced paper floor plans and in-person housing appointments with a rules-driven online room-selection system, which cut the process from months to weeks.
- Built StageDoor, digitizing audition scheduling, check-in, photo capture, and faculty review for 2,500 annual performing arts applicants, reducing decision turnaround from a week to 2 hours.
- Maintained and developed the college's admissions website alongside internal tools for housing, performing arts, and other departments across Enrollment and Student Affairs.

EDUCATION

Bachelor of Fine Arts (BFA), Digital Media ▪ Emerson College, Boston, MA

- First recipient of the degree

SKILLS

Front-End Engineering: Vue 3, TypeScript, JavaScript, Pinia, React, HTML, CSS, Sass

Architecture & Delivery: Component Libraries, Design Systems, Legacy Migrations, CI/CD, REST APIs, Build & Release Engineering

Design & Product: Interaction Design, UI Design, Responsive Web, Accessibility

Also Worked With: Node.js, Python, PHP, Lua, Docker
